DETAILED ACTION

Response to Amendment

- 1. Applicant's amendments filed 03/02/2007 have been entered. It is noted that claims 7, 916, 18,25 and 27 have been amended. As such claims 1 27 are pending. Amendment to the specification has also been accepted.
- 2. Applicant has dutifully overcome the oath/declaration objection, claim objections and 112, second paragraph rejections. As such the Examiner has withdraws these objections and rejections.

Response to Arguments

- 3. Applicant's arguments filed 03/02/2007 have been fully considered but they are not persuasive. It is Applicant's assertion that Immonen does not suggest the importance of translating the data into a string of words that can be recognized by a human. Applicant further contends that Immonen does not suggest the use of the One-Time Pass (OTP) dictionary. The Examiner respectfully disagrees. Immonen teaches that a key is a random string that can consist of digits or bits (see [0043]). The Examiner believes these bits or digits to be recognizable by a human as such. Furthermore, Immonen discloses that while it is possible to send the same string with every message, to achieve greater security it is instead ideal to send new random strings with each message (see [0044]). The Examiner believes these new random strings, which are supplied to the user by a helpdesk to be equivalent to Applicant's one-time password dictionary.
- 4. For at least these reasons, the Examiner maintains the rejection of claims 1 27.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/674,940

Art Unit: 2132

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 1 – 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Immonen in US PGPub No. 2003/0120924 (hereinafter US PGPub '924).

For claim 1 and similar claims 10 and 19, US PGPub '924 discloses:

A method for confirming communication of data to a first device belonging to a first user from a second device belonging to a second user, the method comprising: (see [0018])

receiving a message containing data from the second device at the first device; (see [0027]: first channel)

translating the data into a string of words that can be recognized by a human; (see [0029] and [0052], line 18)

allowing the second device to translate the data into a corresponding string of words; (see [0019])

displaying the string of words to the first user; and

allowing the first user and the second user to confirm a match between the string of words from the first device and the corresponding string of words from the second device, wherein the confirmation process is performed through a separate communication channel, and

Application/Control Number: 10/674,940

Art Unit: 2132

wherein the confirmation ensures that the data sent by the second device is successfully received by the first device, is authentic, and is integrity-checked (see [0031]). (see also Abstract; Figure 2)

For claim 2 and similar claims 11 and 20, US PGPub '924 discloses wherein prior to receiving the message, the first device broadcasts a request asking for the second device's data, and wherein the data can be an identifier. (see [044] and [045])

For claim 3 and similar claims 12 and 21, US PGPub '924 discloses:

wherein the message received by the first device is signed with a private key corresponding to a public key associated with the second device; and

wherein the method further comprises using the public key associated with the second device to verify that the message is signed with the private key associated with the second device. (see [0054], lines 7-10)

For claim 4 and similar claims 13 and 22, US PGPub '924 discloses:

wherein while receiving the message, the first device receives more than one message; and

wherein the method further comprises translating the data in the other messages into strings of words which can be recognized by a human, and displaying these strings of words to the first user, thereby allowing the first user to match one of these strings of words with the corresponding string derived by the second device from the original data (see [0029]).

For claim 5 and similar claims 14 and 23, US PGPub '924 discloses wherein prior to the reception of the message at the first device, the first user obtains a portion of the hash of the data on a separate communication channel and enters this portion into the first device, and wherein the first device uses this portion to filter subsequently received messages. (see [0043], authentication value; Figure 3 a & b)

Application/Control Number: 10/674,940

Art Unit: 2132

For claim 6 and similar claims 15 and 24, US PGPub '924 discloses wherein the data received at the first device contains a cryptographically generated address (CGA) belonging to the second device, which is generated by:

performing a hash function on the second device's public key; and constructing the CGA by combining a number of bits of an address belonging to the second device and a number of bits from the result of the hash function. (see [0045]; [0047): check code]

For claim 7 and similar claims 16 and 25, US PGPub '924 discloses:

wherein the message received by the first device includes a public key associated with the second device; and

wherein the method further comprises performing a hash function on the public key to verify the association between the CGA and the public key associated with the second device. (see [0045]; [0047])

For claim 8 and similar claims 17 and 26, US PGPub '924 discloses wherein the translation uses a one-time password (OTP) dictionary. (see [0044], page 3, lines 7-9)

For claim 9 and similar claims 18 and 27, US PGPub '924 discloses:

wherein the request includes a Crypto-Based Identifier (CBID) belonging to the first device; and

wherein the request is signed with a private key associated with the first device, thereby allowing the request to be verifiably associated with the first device. (see [0044]; lines 3-5)

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laurel Lashley whose telephone number is 571-272-0693. The examiner can normally be reached on Monday - Thursday, alt Fridays btw 7:30 am & 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron, Jr. can be reached on 571-272-3799. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
